Course Overview

This course will provide a comprehensive framework for analyzing the behavior of aggregate economies. Topics will include the determinants of output, unemployment, and inflation, an analysis of short-run fluctuations in economic activity, and theories of long-run economic growth.

Exams, Articles, and Problem Sets

Each exam will be composed of several multiple choice questions and some analytical problems. The final exam will be held in the regular classroom on **Friday August 10th during normal class hours**. There will be no make-up exams.

Problem sets for each chapter will be posted on the course website. I will choose four of these problem sets to be handed in, and I will give you 2 days notice to complete them. Although the other problem sets are not required, I highly encourage you to look at them. The problem sets are designed to aid you in preparing for exams, and their format will appear very similar to the exams. No late homework will be accepted. **Points will be deducted for not having a staple, or having no name.**

There will also be two article analyses that will test your overall understanding of the material; these will also not be accepted late.
